Cotswold Stone

Semi-Dressed Building

One of the most popular building materials used in the Cotswolds, it is cropped by guillotine, or by hand if necessary, to give a face roughly rectangular. It can be supplied random in both length and height with standard bed dimensions of between 100mm – 125mm. Typically used for the outer skin of cavity walls.

Sawn Split & Tumbled Building

Sawn top and bottom in our shelly/white bed with course heights of 65mm, 90mm, 115mm & 140mm using a 10mm mortar joint. A very quick and easy material to lay involving minimal labour costs. It is supplied in random lengths with bed widths ranging from 100mm – 150mm. Also typically used for the outer skin of cavity walls.

Cotswold Stone

Dry Stone Walling

Dry stone walling is hand selected to ensure a consistent quality and can be cropped by guillotine to give a clean face. Stones are irregular in shape, vary in size and range in thickness from 50mm – 150mm. Typically used for boundary, garden and ornamental walls generally constructed with no mortar.

Ashlar Walling

This traditional product is sawn six sides; faces will have a clean smooth finish and four good arises. Ashlar can be produced to the clients specifications of length, width (bed dimension) and height (rise of bedding plane). This material can also be used for a range of architectural dressings and ornamental features.

Bay Windows

Made to clients specifications including angled, curved and semi-circular bays.

Arched & Circular Windows

Our masons will hand carve arched and circular windows to individual requirements to include arched lintels, keystones, jambs and cills.

Lintels, cills, mullions & transoms

Lintels and cills are horizontal stone sections used to bridge an opening in a wall for a door or window. Mullions are vertical stones used between glass sections of multi-light windows and transoms are their horizontal

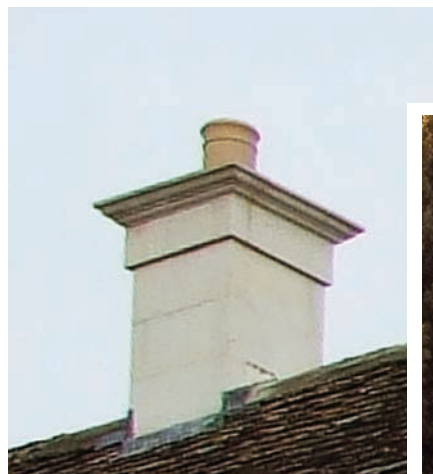

Door Surrounds

As with windows we can design and produce a wide variety of door surrounds to the clients specifications, including a range of mouldings for jambs, lintels and arches.

Chimney & Capping

Our masons can handcraft all chimney components including ashlar blocks, weathered or string courses and moulded caps.

Corbels

These are projecting blocks used to support structures such as a canopy over a door surround. They are normally carved to a particular moulding, specified by the client.

Cornice

This moulded or weathered horizontal course is normally positioned on top of a wall to again form an architectural feature of a building.

String Course

These are either a horizontal course or moulding which projects from the surface of a wall in the same way that a label mould works. They add aesthetic, architectural value to a building and are common in the Cotswolds.

Label Moulds & Kneelers

These are carved, moulded sections used to form a horizontal, projected barrier above a window or door lintel to throw off rain water.

Plinth Course

A plinth course projects at the foot of a wall or column. They are typically chamfered or carved to a specified moulding.

Quoins

Quoins are dressed, sawn six sides stones which are used to add definition and strength to the the corners and angles of buildings. They are also used to form window and door surrounds as an alternative to straight jambs.

Cotswold Stone

Coping Stone

This is a protective course of masonry used for capping walls and gables. It is normally weathered and can also incorporate a moulding.

Balustrades & Columns

These are carved stone balusters, pilasters or vertical supports for a carved handrail or coping.

Columns

Columns are classical architectural feature which can be made to your specification, based on traditional designs.

Flagstones

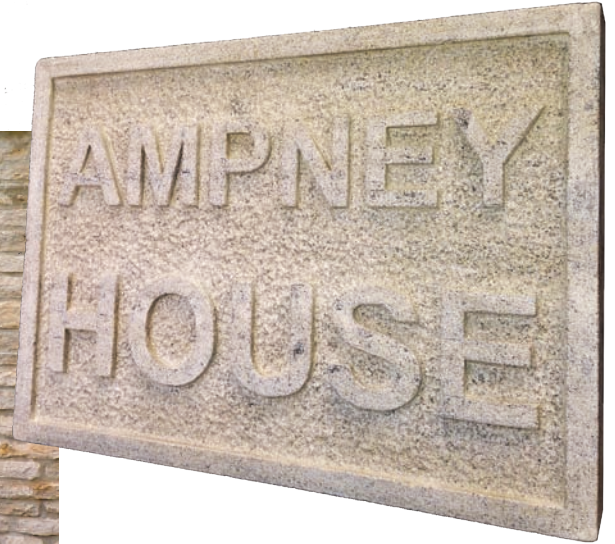

We produce two distinctive types of flagstones to suit individual tastes. Our base bed flagstones are cut from the same Cotswold buff stone that you would expect to see from our architectural dressings and our darker top bed flagstones are produced with an abundance of seashell content making this a particularly attractive product. Traditional flagstones were cut at a minimum of 50mm thick but with modern equipment we are able to reduce this to 25mm top suit today's building and architectural requirements. We can advise on the size of flagstones to suit each individual project and we also offer a variety of finishes including undulated, distressed and Cabouchons, to make up a unique floor.

Date & Name Stones

Our masons can carve date or namestones for your property to your specifications. Family crests or coats of arms are also available on request

Pier Caps & Finials

Caps are usually large moulded stones used at the top of a pier and often incorporating both a ball and finial. These can also be used to form a premier ornamental feature above a gate pier, spire or gable end

Architectural Dressings

These are specialist, bespoke products which are sawn and then hand finished or carved by our master masons. We are able to work from detailed drawings or work with clients early in the design process in order to fulfil specific requirements.

Roof Tiles

Stone roofing is one of the most distinctive products available in the Cotswolds and can be seen on many roofs across the whole of the South of England. The tiles are available in both “new” and “aged” form to suit a variety of projects from new builds through to church renovations and have been used on listed buildings across the region as well as historic Oxford colleges. These are available in incremental lengths ranging from 22” to 6” and come in variety of widths.
